MOHITH RAJENDRA

SENIOR SOFTWARE ENGINEER | DATA PLATFORMS | AI DATA-CENTER NETWORKING

Seattle | 213-265-2099 | mohithraj43@gmail.com | www.linkedin.com/in/mohithraj

PROFESSIONAL SUMMARY

Senior Software Engineer with 8+ years of experience building and operating large-scale distributed data platforms and real-time network-monitoring systems supporting GPU fleet management and readiness. Experienced in Kafka, Flink, Kubernetes, cloud infrastructure, and production reliability. Proven track record designing scalable frameworks, optimizing high-volume workloads, and leading responses to Sev-1 customer incidents.

CORE EXPERTISE

Languages & Application: Python, Java, C, C++, JavaScript, Spring, Flask, Maven, REST APIs.

Cloud & Infrastructure: Kubernetes, Docker, Helm, Istio, OCI, AWS, GCP, Azure, Terraform, CI/CD, nginx, Ingress.

Data, Streaming & Observability: Oracle ADB, Flink, Kafka, MongoDB, gNMI, syslog, InfluxDB, Telegraf.

EXPERIENCE

Senior Software Engineer | Oracle **Aug 2022 - Present**

- Leading development of a network-health system designed to assess safe link or device removals in a three-tier fabric spanning 7M interfaces and 200K devices, using topology and real-time health data.
- Designed a reusable aggregation framework for GPU-rack validation, cutting onboarding time by 2 weeks by removing cross-team integration points and improving detection performance by 40%.
- Delivered 10+ real-time network detections (link/device health, raw BER, power, temperature, syslog) supporting GPU fleet readiness from data-hall arrival through deployment, validation, and customer handover across 16+ production environments processing 4M+ metrics/sec at <5-second latency.
- Led the rearchitecture of hub-based monitoring into a cell-based design and implemented cross-building detections across GPU data halls, extending network-health coverage and reducing blast radius by 80%.
- Built network-monitoring alarms, dashboards, and agent-based runbooks that helped reduce SEV-2 incidents, shorten root-cause investigations, and cut MTTR by 60%.
- Built monitoring to detect switch configuration-mode access, surfacing manual changes early and reducing configuration-drift outage risk across 160K+ devices in GPU data centers.
- Migrated 100+ console plugins from TeamCity to OCI pipelines, saving 400+ developer days and reducing build time by 7 minutes per build. Also migrated Console Telemetry to OKE and built a shared module adopted by multiple platform teams. Earned the organization's Customer First Award for the plugin migration and the OCI Platform Magma Award for the telemetry work.

Software Development Engineer 2 | VMware **Jul 2018-Jan 2021**

- Led a team in standardizing production deployments with a Python framework, reducing deployment code by 84%.
- Developed a MongoDB-based engineering metrics platform adopted by 3 organizations and 380 projects to analyze delivery bottlenecks.
- Implemented service-mesh traffic management for 68 Kubernetes microservices using Ingress and nginx load balancing.
- Built a Kafka-based change-management application for dependent-service deployments, reducing bug-fix SLA by 50%.
- Built a self-service UI for infrastructure requests across Aurora, S3, and RDS, and automated new-service deployment through production, maintaining CI/CD standards and saving 4 developer hours per request.

Software Development Engineer 1 | VMware **Jul 2017-June 2018**

- Built CI/CD infrastructure on Kubernetes supporting push to production within a two-hour SLA and reducing MTTR by 22%.
- Established CloudHealth monitoring with InfluxDB and a custom Telegraf agent, helping achieve 99.99% availability.

Software Development Intern | VMware **Jan 2017-June 2017**

- Created a Kubernetes cluster lifecycle plugin subsequently released as open source by VMware.

EDUCATION

University of Southern California **Los Angeles, USA**

Master of Science - Computer Science (GPA 3.73) Jan 2021-Aug 2022

R.V. College of Engineering **Bengaluru, India**

Bachelor of Technology - Computer Science & Engineering (CGPA 8.48/10) Aug 2013-Jun 2017
